

ValueObject

```
classDiagram
    class ValueObject {
    }
    class PushConfiguration {
        +pushEnabled
        +adAgreement
        +adAgreementNight
        +PushConfiguration()
    }
    PushConfiguration --|> ValueObject
```

The diagram illustrates a class hierarchy. At the top is the 'ValueObject' class, represented by a rectangle divided into three horizontal compartments. The top compartment contains the class name 'ValueObject', while the two lower compartments are empty. Below 'ValueObject' is the 'PushConfiguration' class, represented by a rectangle divided into three horizontal compartments. The top compartment contains the class name 'PushConfiguration'. The middle compartment lists three attributes: '+ pushEnabled', '+ adAgreement', and '+ adAgreementNight'. The bottom compartment lists a constructor: '+ PushConfiguration()'. A blue arrow with an open triangular head points from the top of the 'PushConfiguration' class to the bottom of the 'ValueObject' class, indicating that 'PushConfiguration' inherits from 'ValueObject'.

PushConfiguration

+ pushEnabled
+ adAgreement
+ adAgreementNight

+ PushConfiguration()
