

com.toast.android.gamebase.auth.data.
BanInfo.from

com.toast.android.gamebase.auth.transfer.data.
TransferAccountFailInfo.from

com.toast.android.gamebase.error.data.
UpdateInfo.from

getStringExtra

```
graph LR; A[com.toast.android.gamebase.auth.data.BanInfo.from] --> D[getStringExtra]; B[com.toast.android.gamebase.auth.transfer.data.TransferAccountFailInfo.from] --> D; C[com.toast.android.gamebase.error.data.UpdateInfo.from] --> D;
```

The diagram illustrates three static methods from different classes in the `com.toast.android.gamebase` package, all of which call the `getStringExtra` method. The source methods are `BanInfo.from`, `TransferAccountFailInfo.from`, and `UpdateInfo.from`. Each is represented in a white box with a black border. Blue arrows point from each of these boxes to a gray box on the right labeled `getStringExtra`.
